Feature Documentation — Platform Overview & Session Additions

Generated: 5 October 2026

PART A — Features Already on the Platform

- **Home Dashboard**

Landing page with appliance category grid, promotional banners, quick-access service cards, and a horizontal scroll carousel of featured services.

- **All Services Page**

Full catalogue of appliance services grouped by category (AC, Washing Machine, Refrigerator, TV, Water Purifier, etc.) with filter tabs and service cards showing name, price, and image.

- **Service Detail Page**

Per-service page with hero image, description, what's included checklist, technician expertise info, FAQs, and a sticky Book Now CTA.

- **Booking Flow (4-step modal)**

Multi-step booking: (1) date picker with 7-day scroll + time slot selection, (2) technician selection with ratings, (3) address + price summary, (4) booking confirmation screen with ID.

- **Login / Sign-up Page**

Mobile OTP-based login and sign-up with name, email fields. Auto-fills demo OTP after 1 second. Redirects to home on success.

- **My Bookings Page**

Lists all bookings with status badges (Upcoming, Completed, Cancelled, Live), booking ID, date/time, address. Filter tabs: All / Upcoming / Completed / Cancelled.

- **My Devices Page**

Device inventory with warranty status indicators, days-remaining countdown, service history per device, and an Add Device flow.

- **Care Plan Page**

Extended warranty plan options with feature comparison, pricing, and a subscribe CTA.

- **Locate Us Page**

Store/service centre locator with map embed and search.

- **Cart / CartDetails Page**

Service cart showing added services, price summary, and checkout.

- **Profile Page**

User profile with name, phone, address management.

- **Navbar & Footer**

Persistent navigation with logo, links, user menu with logout, cart badge. Footer with support links and social icons.

- **Location Bar**

Pincode input bar at top of dashboard for area-based service availability.

PART B — Features Built & Fixed This Session

- ◆ **Auth Persistence (Login Fix)**

User login now persists across page refresh. User object saved to localStorage (key: resq_user). AuthContext restored on mount with a hydrated flag. All protected pages updated to use hydrated before redirecting to /login.

- ◆ **Bookings Persistence**

Bookings created via BookingFlow are saved to localStorage (key: resq_bookings) and restored on every load. They survive logout/login. My Bookings merges user bookings (newest first) with mock bookings.

◆ **BookingFlow — Save on Confirm**

When user taps 'Confirm Booking' in step 3, addBooking() is called in AuthContext, capturing service name, date, slot, technician, address, price, and image.

◆ **My Bookings — Live Tracking Card**

Mock 'live' booking for Arjun Mehta shows an animated SVG map with a moving technician dot, ETA countdown, technician card with name/rating/jobs, and a tap-to-call button.

◆ **Track Live Button — Live Only**

Track Technician button now only shows on bookings with status 'live'. Upcoming bookings show only a Reschedule button.

◆ **GPS/Map Tracking UI**

Animated SVG map simulating technician route through Mumbai waypoints. Technician dot moves every 2 seconds, ETA updates in real time. Destination marker shown.

◆ **Service Report PDF Modal**

Post-service job card modal with technician info, parts used table, GST-inclusive cost breakdown, 30-day warranty note, and a Download button that triggers window.print().

◆ **Rating & Review Modal**

Star rating modal for completed bookings. Aspect chips appear for 4/5 star ratings (e.g. 'On time', 'Clean work'). Written review textarea. Success screen after submission.

◆ **FAQ Chatbot (Floating)**

Floating chat widget with 20+ keyword-matched responses, quick reply chips, unread badge counter, and a close (x) button. Hidden on the login page.

◆ **SLA Badge**

Shows pincode-based SLA promise ('Same-day' or 'Next-day') on service pages. Defaults to 'Available today' without requiring a pincode. Updates from localStorage if pincode set.

◆ **Capacity-Based Slot Picker**

Time slots show remaining capacity. Slots at 0 show 'Fully booked' and are disabled. Slots at 1 show 'Only 1 slot left!' in orange.

◆ **On-Demand Banner in Booking**

Step 1 of booking shows an orange 'Need it today?' banner when Today is selected, highlighting express availability.

◆ **Price Savings Badge on Service Pages**

Each service shows original market price (strikethrough) and 'You save X vs local market' green badge.

◆ **Bundle Deals Component**

Horizontal scroll bundle cards on dashboard: AC+Geyser (Rs.799), AC+Purifier (Rs.699), Triple Appliance (Rs.999).

◆ **AMC Plans Page**

Silver/Gold/Platinum annual maintenance plans with feature checklists, GST-inclusive pricing modal, loading spinner on pay, and a success screen with Plan ID and expiry date.

◆ **Claim Form (2-step)**

Step 1: device selection + issue type grid (8 options). Step 2: description textarea + photo upload. Step 3: confirmation screen with generated Claim ID.

◆ **Repair vs Replace Calculator**

Inputs: appliance type, age, repair cost. Outputs a verdict (repair/replace) based on repair-cost-to-value ratio and remaining useful life. Visual result card.

◆ **Referral & Earn Page**

Unique referral code (RESQ + last 4 of phone), shareable link, copy-to-clipboard, referral history table with earned credits, and a 3-step explainer.

◆ Notifications Page

Warranty expiry nudges, booking status alerts, promotional offers. Filter tabs: All / Warranty / Bookings / Offers. Amber urgent banner for unread warranty alerts. Mark all read.

◆ Warranty Automation Nudges

Device warranty expiry alerts in Notifications with days-remaining and direct CTA to buy Care Plan.

◆ Login Page — Standalone Layout

Navbar, footer, and FAQ bot are all hidden on /login. Login card uses fixed inset-0 positioning to be perfectly centered on screen.

◆ Logout Preserves Bookings

Logging out no longer clears saved bookings from localStorage. Bookings persist across sessions for the same device.

PART C — Features That Can Be Built Next

■ Real Backend + Auth

Replace localStorage auth with a real API (e.g. Supabase or Firebase). OTP via SMS (Twilio/MSG91). User sessions with JWT tokens.

■ Payment Gateway

Integrate Razorpay or Juspay for real payments on AMC plans, service bookings, and cart checkout.

■ Real-Time GPS Tracking

Replace the mock SVG map with Google Maps or Mapbox + a WebSocket feed from the technician's phone location.

■ Push Notifications

Web push or in-app notifications for booking confirmations, technician dispatch, and warranty alerts using Firebase FCM.

■ Technician App (Mobile)

A companion app for technicians to accept jobs, update status, share location, and upload service completion photos.

■ Admin Dashboard

Internal ops dashboard: manage bookings, assign technicians, view revenue, track SLA breaches, and export reports.

■ Dynamic Service Catalogue

Pull services, prices, and images from a CMS (Contentful or Sanity) so catalogue can be updated without code deploys.

■ Search & Filters

Full-text search across all services with filters by price range, appliance type, availability, and rating.

■ Multi-Address Support

Let users save multiple service addresses (home, office) and pick one per booking.

■ Subscription Auto-Renewal

AMC plans with auto-renewal reminders, billing history, and cancel/upgrade flows.

■ In-App Chat with Technician

Real-time chat between user and assigned technician after booking confirmation.

■ Photo Upload for Claims

Actually upload claim photos to cloud storage (S3/Cloudinary) and show them in the claim tracking view.

■ Dynamic Slot Availability

Connect slot capacity to a real scheduling engine so booked slots decrement in real time.

■ Loyalty / Credits Wallet

A wallet showing earned referral credits, cashback, and vouchers — redeemable at checkout.

■ **Service History Export**

Let users export full service history as a PDF for insurance or warranty claims.

■ **Multi-language Support**

Hindi and regional language support for broader reach across Tier 2/3 cities.

■ **Accessibility (a11y)**

ARIA labels, keyboard navigation, screen reader support, and sufficient colour contrast across all pages.

■ **Dark Mode**

System-synced and manually toggleable dark mode across all pages.
